## SPECIFIC COMMENTS TO AUTHORS

Marcio JCZ et al. of "Diabetic gastroenteropathy is a general overview of on the pathophysiology, symptoms, diagnosis, and treatment of diabetic gastroenteropathy while authors of the letter are pointing towards a separate point of gastric cancer, diabetes melitus and gastroenteropathy which is not even mentioned in the Marcio JCZ review article. The language of letter is vagues and does not convey any new information which was not known previously in the literature.

## SPECIFIC COMMENTS TO AUTHORS

This manuscript is a letter to editor that suggested the relationship of gastric cancer (GC), mellitus diabetes (DM) and gastroenteropathy. The authors found that gastroenteropathy was generally observed in patients with concurrent GC and DM, and some of the symptoms due to gastroenteropathy had remission after gastrectomy. The authors guessed that radical resection of GC as well as DM remission after gastrectomy may relieve these symptoms. This point of view is novel and interesting, which will be of interest to clinicians in the field. Further studies are expected in the future. However, the following minor issues need to be addressed: 1. I think the authors substantially stated the relationship between gastroenteropathy due to DM and gastrectomy. Is it necessary to limit the object to patients with GC? 2. Please replace RCT with "randomized controlled trial".
