## **SPECIFIC COMMENTS TO AUTHORS**

I found this manuscript very informative because bladder injuries in bedridden patients may be more common than anticipated in the era of aging societies around the world. The authors are suggested to revise the manuscript with following comments. **MAJOR POINTS:** 1. **OUTCOME** and **FOLLOW-UP:** After surgery, 1) any postoperative complications occur? 2) what the authors did for urinary catheterization, re-insertion of urethral catheter (please specify the type of catheter, if applicable), or cystostomy?? **MINOR POINTS:** 1. History of past illness in **CASE PRESENTATION:** "chronic obstructive pulmonary stabilization" means "chronic obstructive pulmonary disease"? 2.

Figure 1E, legend: regarding the sentence "and the end of catheter was inserted into the bladder wall", "inserted into" may be replaced with "sited in" or "found in" (because the author did not insert the catheter by themselves). 3. **DISCUSSION**, row 6 and 17: The authors cited the article by Chan VSH et al. [3]; however, this article described diagnostic differentiation with non-operative management of bladder diverticulum. Please check if the citation is correct. 4. **DISCUSSION**, row 22: "Jennifer M" must be "Martin J et al."

#### **SPECIFIC COMMENTS TO AUTHORS**

Fairly well written, interesting case. It should raise awareness to this complication in emergency department patients. However, I would like to know a more detailed history, physical examination and post-operative course. References could also be optimized by citing more recent articles and less clinical cases; at least one review should be included. Please see attached document for a more detailed revision.

#### **SPECIFIC COMMENTS TO AUTHORS**

This is a rare but, clinically insignificant case, well managed, well written. Still, it is interesting, easy to read. The readers should be aware of such a complication.

In History of Past Illness please correct "indwelling catheter status" instead of "catheter indwelling status".
