Inflammatory pseudotumor-like follicular dendritic cell ...

onlinelibrary.wiley.com › Pathology

Inflammatory pseudotumor (IPT)-like follicular dendritic cell (FDC) sarcoma is a rare neoplasm typically occurring in the spleen or liver. We present **six cases** of **EBV+ IPT-like FDC sarcoma** of the spleen among Koreans along with their clinicopathologic features and IHC results.

5 Abstract

6 BACKGROUND

7 Follicular dendritic cell (FDC) sarcoma/tumor is a rare malignant tumor of

8 follicular dendritic cells, which is considered low-grade sarcoma that can

9 involve lymph nodes or extranodal sites. Conventional FDC sarcomas are

10 negative for Epstein-Barr virus (EBV), whereas the inflammatory

11 pseudotumor-like variant consistently shows EBV in the neoplastic cells.

12

13 CASE SUMMARY

14 We report two cases of inflammatory pseudotumor-like FDC sarcoma in the

Follicular dendritic cell (FDC) tumor is an uncommon neoplasm, which typically presents as a slow-growing, painless mass, without systemic symptoms. This tumor occurs primarily in lymph nodes, especially cervical and axillary, however, involvement of extranodal sites such as the tonsils, spleen, and gastrointestinal tract has been reported [1].
