**COMMENTS TO AUTHORS**

The manuscript submitted by Alzahrani Shatha, et al. describes the epithelium responses to the H. pylori infection to contribute to pathogenesis. This review can support good information regarding the H. pylori pathogenesis to readers.

## COMMENTS TO AUTHORS

Dear Editors: In this review article, the authors summarize available data in understanding the interaction between Helicobacter pylori and gastric epithelial cells. Major comments: 1. The authors are to be commended for comprehensively reviewing relevant literature on this topic, but they can do more to help readers appraise how convincing the data is. For example, findings that have been repeatedly validated should be distinguished from those just preliminarily reported. 2. From a clinician's perspectives, a few notes on the relative importance of these interactions in terms of clinical outcomes will be useful. Minor points: 1. There are a few typos, e.g., line 4 from the bottom in page 3: An essential step in the in colonization; line 4 to line 2 from the bottom in page : bold types for no apparent reasons; line 3 from the bottom in page 11: induced by H. pylori is that is able to... etc.
