Gender medicine: lessons from COVID-19 and other medical conditions for designing health policy

Machluf Y *et al.* Gender medicine and adolescent health

Yossy Machluf, Yoram Chaiter, Orna Tal

Abstract

Gender-specific differences in the prevalence, incidence, comorbidities, prognosis, severity, risk factors, drug-related aspects and outcomes of various medical conditions are well documented. We present a literature review on the extent to which research in this field has developed over the years, and reveal gaps in gender-sensitive awareness between the clinical portrayal and the translation into gender-specific treatment regimens, guidelines and into gender-oriented preventive strategies and health policies. Subsequently, through the lens of gender, we describe these domains in detail for four
