COMMENTS TO AUTHORS

The manuscript entitled "Helicobacter pylori Associated Asian Enigma: Does Diet Deserve Distinction?" is an interesting review concerning explanation of prevalence differences of H pylori and gastric cancer among different regions of Asia. The topic is attractive and useful for physicians of Asia. Though the concepts exposed there may be extrapolated to some regions of Latin America and Africa. The title is adequate and the redaction of the text is good. The text is well referenced. It only needs exhaustive revision of English grammar. I recommend the editors of the journal, to accept this document for publication after minor changes.

COMMENTS TO AUTHORS

In this review, the authors focused several factors involving dietary components in detail with respect to H. pylori-associated enigma among Asian countries. The manuscript is well written and covers recent reports. It is expected that readers of the journal reads with interest. The authors should revise following minor points. (1) Figure legends should include the explanation of each contents. (2) English editing is necessary.
