### Restoration of energy level in the early phase of acute pediatric pancreatitis

Mosztbacher *et al.* Enteral feeding in acute pediatric pancreatitis

Dóra Mosztbacher, Nelli Farkas, Margit Solymár, Gabriella Pár, Judit Bajor, Ákos Szűcs, József Czimmer, Katalin Márta, Alexandra Mikó, Zoltán Rumbus, Péter Varjú, Péter Hegyi, Andrea Párniczky

#### Abstract

Acute pancreatitis (AP) is a serious inflammatory disease with rising incidence both in the adult and pediatric populations. It has been shown that mitochondrial injury and energy depletion are the earliest intracellular events in the early phase of AP. Moreover, it has been revealed that restoration of intracellular ATP level restores cellular functions and defends the cells from death. We have recently shown in a systematic review and meta-analysis that early enteral feeding is beneficial in adults; however, no reviews are available concerning the effect of early enteral feeding in pediatric AP. In this minireview, our aim was to systematically analyse the literature on the treatment of acute pediatric pancreatitis. The preferred reporting items for systematic review (PRISMA-P) were followed, and the question was drafted based on
