COMMENTS TO AUTHORS

This review written by Dr Ilaria Umbro et al. has perfectly gone through the current knowledge of acute kidney injury and post-reperfusion syndrome in liver transplantation. The manuscript comprehensively reviewed key articles addressed on this issue and well organized them. I thoroughly enjoyed reading it, especially, the authors indicated that the better understanding of predisposing factors for post-LT AKI might enable improved methods to prevent or ameliorate injury. The reviewer agrees with the author about the idea that this new understanding may possibly help clinicians to develop further studies in order to better clarify PRS and PRS-induced AKI, in particular in DCD recipients.

COMMENTS TO AUTHORS

This review is perfectly written and describe all the current knowledge of acute kidney injury and post-reperfusion syndrome in liver transplantation. In particular further studies could better clarify our understanding our knowledge on PRS and PRS-induced AKI. I congratulate the authors and do not have any comment
