COMMENTS TO AUTHORS

The case report showed a successfully treated small bowel diverticula by medical treatment. The case was detailly introduced and discussed. However, no much novelty was provided becuse the perforation could be treated both by medical and surgical method. Moreover, the most concern is the recurrence risk of the lesion if it is not removed by surgeon.

COMMENTS TO AUTHORS

This is a case report of rare GI diseases; perforated jejunal diverticulitis in a patient whose medical treated was successfully resolved without surgery. The authors admitted that an initial treatment with antibiotic is necessary, but surgical resection is acquired if peritonitis became a risk. Although the knowledge is not novel, a careful evaluation of the case is meaningful because it can be highly risk and the patient response is case per case dependent. This should be a normal practice for surgeon.

COMMENTS TO AUTHORS

The paper reported the author's experience of non-operative successful management of a perforated small bowel diverticulum and is worth reading. The paper would be more comprehensive if the discussion would be more detailedness, especially with the introducing the use of the clips, etc.
