Abstract

Biliary tract cancer, or cholangiocarcinoma, comprises a heterogeneous group of malignant tumors that can emerge at any part of the biliary tree. This group is the second most common type of primary liver cancer. Diagnosis is usually based on symptoms, which may be heterogeneous, and nonspecific biomarkers in serum and biopsy specimens, as well as on imaging techniques. Endoscopy-

Risk Factors

Prevention

Cholangiocarcinoma is cancer that forms in the slender tubes (bile ducts) that carry the digestive fluid bile. Bile ducts connect your liver to your gallbladder and to your small intestine. This condition, also known as bile duct cancer, is an uncommon form of cancer that occurs mostly in people older than age 50, though it can occur at any age. Doctors divide cholangiocarcinoma into different types based on where the cancer occurs in the bile ducts: 1. Intrahepatic cholangiocarcinoma occurs i...

Bile duct cancer

Medical Condition

Cancer that affects the bile duct

A cancer that begins in the bile duct, a duct which carries bile and digestive fluid through liver.

-  Very rare (Fewer than 20,000 cases per year in US)
-  Diagnosis often requires lab test or imaging
-  Treatment from medical professional advised
-  Can last several years or be lifelong

Caused due to bile duct cell DNA mutations Symptoms are fever, abdominal pain, itching and jaundice Treatment includes surgery, radiation and chemotherapy.

Symptoms

The commonly observed symptoms include:

- Jaundice
- Itching, due to excess bilirubin
- Loss of appetite
- Fever
- Abdominal pain
- Darkening of stool and urine
