Endoscopic Balloon Dilation for management of stricturing Crohn's disease in children.

McSorley, B *et al.* EBD for stricturing pediatric Crohn's

Abstract

BACKGROUND

Crohn's Disease has a multitude of complications including intestinal strictures from fibrostenotic disease. Fibrostenotic disease has been reported in 10-17% of children at presentation and leads to surgery in 20-50% of cases within ten years of diagnosis.

When symptoms develop from these strictures, the treatment in children has primarily

Endoscopic management of stricturing Crohn's disease

<https://pubmed.ncbi.nlm.nih.gov/32537911>

The natural history of Crohn's disease (CD) usually begins with primary intestinal inflammation, which progresses gradually to stricturing lesions. Stricture is a complicated, intractable but very common clinical problem in the management of CD. Difficulties remain in treating stricturing CD because ...
