COMMENTS TO AUTHORS

I read the manuscript named "Diagnosis and Management of Laryngeal Cleft: a single centre experience and a novel endoscopic technique" and my recommendations are as follows; 1. The importance of the research contents; The subject of the manuscript is very important. Laryngeal cleft is a rare congenital abnormality in the posterior laryngo-tracheal wall. Patients may present with recurrent aspiration pneumonias, stridor, choking on feeds or dysphonia. Diagnosis requires a high index of suspicion, accurate interpretation of preoperative studies, and thorough endoscopic evaluation. Early diagnosis and surgical repair reduce irreversible pulmonary damage other associated morbidities. It is crucial that the authors point out to a new endoscopic repair technique. 2. The novelty and innovation of research; This study gives new knowledge to the literature. 3. Presentation and readability of the manuscript; This manuscript was well-written and documented. The presentation of the study is very good. This manuscript is readable and worth to be published in the World Journal of Otorhinolaryngology.

COMMENTS TO AUTHORS

This is a paper reporting diagnosis of management of laryngeal cleft. The subjects for this investigation included 22 children. A novel endoscopic technique is a main point of this paper. However, the endoscopic technique was not described clearly. Illustrations or photos including Negus knot pusher are required for readers to understand clearly.
