## COMMENTS TO AUTHORS

The authors present an interesting case study reporting on a rare differential diagnosis of a subepithelial tumor, i.e. sparganosis. Therefore, I would like to encourage the authors to focus on the fact that ESD is a rather uncommon way in order to treat sparganosis as it is always hard to rule out a multilocular appearance of the parasit. Furthermore, some additional endoscopic images of the ESD procedure would grade up the case report.

## COMMENTS TO AUTHORS

Comments to the author This article is very interesting from the point of the parasitic disease because rectal sparganosis is an uncommon and rare. Furthermore, ESD performed to remove this parasite lesion was probably the first case. This text was well-written English and the figures were also fine. However, some minor revisions are needed. Minor 1. (Page 3, line 65) (Page 5, line 1) (Page 5, line 133) ("in Southeast Asia, China, Japan, and Korea." was rather incorrect. You'd better to revise as follows; "in Southeast Asia such as China, Japan, and Korea." 2. (Page 4, line 96-97) "For complete resection of the lesion," was also rather incorrect. You'd better to revise as follows; "For complete and total resection of the lesion" 3. (Page 5, line 141-143) "ELISA performed for sparganum-specific IgG is highly sensitive and specific. Serum ELISA has 88% sensitivity and 97% specificity." Please add the references with regard to Serum ELISA sensitivity and specificity of sparganum parasite. 4. Figure 1: Please delete the date of the endoscopy for privacy of the patient.

## COMMENTS TO AUTHORS

This paper presents a rare rectal sparganosis infection mimicking rectal submucosal tumor including a clear description of family history, personal history, clinical tests, treatment and prognosis of the patient. This case provides an interesting diagnosis of intestinal submucosal tumor which may contribute to the differential diagnosis of that. However, some description repeated a little more in this paper and it will be better to add the distinguish between this case and other common intestinal submucosal tumor.

## COMMENTS TO AUTHORS

The author reported the 'Endoscopic resection of sparganosis presenting as colon submucosal tumor. A case report'. These findings are rare and should be considered in the differential diagnosis of submucosal tumor in gastrointestinal tract. It is well organized and systemically analyzed. Reviewer hopes that this manuscript would be accepted.
