COMMENTS TO AUTHORS

Looks good to me. It is too bad that this is not a series to show that this really works.

COMMENTS TO AUTHORS

This is an interesting and innovative approach of the management of refractory pain in mesenteric panniculitis. Patient investigation is also rational and complete. As expected from a case report, the long term results are unknown. It is also unclear whether schwannoma excision contributed to pain alleviation.

COMMENTS TO AUTHORS

Mesenteric panniculitis is a rare disorder that is characterized by chronic inflammation and fibrosis of the mesentery and with a severe abdominal pain. This paper reported a successful treatment to the symptom with EUS-guided celiac plexus block. This is actually the first report about the use of EUS-guided celiac plexus block method to relieve refractory abdominal pain in mesenteric panniculitis patient. I therefore recommend to publish the paper in the journal of the World Journal of Gastrointestinal Endoscopy
