Manuscript type: TOPIC HIGHLIGHT

Current status³ of laparoscopic and robotic ventral mesh rectopexy for external and internal rectal prolapse

van Iersel JJ *et al.* Complications, recurrence rate and functional outcome

Jan J van Iersel, Tim JC Paulides, Paul M Verheijen, John W Lumley, Ivo AMJ Broeders, Esther CJ Consten

Abstract

External and internal rectal prolapse with their affiliated rectocele and enterocele, are associated with debilitating symptoms such as obstructed defecation, pelvic pain and faecal incontinence. Since perineal procedures are associated with a higher recurrence rate, an abdominal approach is commonly preferred. Despite the
