## COMMENTS TO AUTHORS

Comment for ESPS Manuscript NO: 20684 This was a well written manuscript. The quality of the work described is adequate to accept in the current format. However, there's one suggestion in the manuscript that need to edit. 1. The figure 1 legend is very confusing. The authors should be re-arranged by giving more written information in the text.

## COMMENTS TO AUTHORS

This is a short case report that described the procedure of autotransplanting a premolar to replace a maxillary central incisor. This technique has been used for many years and there is nothing new in the report. Nonetheless this article could serve as a reminder to the readers that autotransplantation could be a viable treatment option in a growing patient. As an improvement, the authors shall include other treatment options and their pros and cons, indications/contraindications, etc. in the discussion.
