

# Biostatistics statement

Manuscript title:

**Use of selective serotonin reuptake inhibitors and their relationship with Irritable bowel syndrome-a population based study**

The statistical methods of this study were reviewed by

Ching-Heng Lin and Shih-Ni Chang from Healthcare Service

Research Center (HSRC) of Taichung Veterans General Hospital.

Statistical methods of the present study are adequately and appropriately described when they were used to verify the results.

The statistical techniques are suitable and correct.
