**Distally based perforator sural flaps for foot and ankle reconstruction**

Shi-Min Chang, Xiao-Hua Li, Yu-Dong Gu

**Abstract**

**1**  
Distally based perforator sural flaps from the posterolateral or posteromedial lower leg aspect are initially a neurofasciocutaneous flap that can be transferred reversely to the foot and ankle region with no need to harvest and sacrifice the deep major artery. These flaps are supplied by a perforating artery issued from the deep peroneal artery or the posterior tibial artery, and the chain-linked adipofascial neurovascular axis
