<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

It is an interesting case report that deserves to be published. I have only one question: why was used an Endo GIA and not a regular GIA to the ileo-ileal anastomosis?

COMMENTS TO AUTHORS

This is a well written case report on a fairly common subject. It is well known that Meckel's diverticulum can cause intestinal obstruction and can reach fairly large dimensions, depending on the duration of the sub-occlusive symptoms. Therefore no new insight are added to the topic by this case report.

COMMENTS TO AUTHORS

1) I wonder if the author could diagnose before the operation. In addition, if the author shows the computed tomography and points out the diverticulum before the operation, it would be helpful for the future diagnosis for reader and might be interesting. 2) Please indicate diverticulum with arrow in figure 2 and 3 for the better understanding.
