Acute appendicitis following endoscopic mucosal resection of cecal adenoma

Yukako Nemoto, Jureya Tokuhisa, Nagasato Shimada, Tatsuya Gomi, Itaru Maetani

Abstract

Endoscopic mucosal resection (EMR) allows the removal of flat or sessile lesions, laterally spreading tumors, and carcinomas of the colon or the rectum limited to the mucosa or the superficial submucosa. Acute appendicitis is the most common abdominal emergency requiring emergency surgery, and it is also a rare complication of diagnostic colonoscopy and therapeutic endoscopy, including EMR. In the case presented here, a 53-year-old female underwent
