COMMENTS TO AUTHORS

The article: "Health related quality of life (HRQOL) is an important outcome measure in chronic diseases" aimed to investigate the health related quality of life among people with type 2 diabetes mellitus in Northwest of Iran. The study is a cross-sectional study of 394 patients with type 2 diabetes mellitus. The authors collected general information and lifestyle factors about them and describe the results of health related quality of life found in type 2 diabetes mellitus in relationship with psychological and social variables; they consider the elements for correcting lifestyle and providing services that can be effective steps to improve the health related quality of life of people with type 2 diabetes mellitus. The paper is interesting and has been developed with appropriate methodology. The only flaw is that the authors should consider the presentation of the Abstract with many abbreviations and is difficult to understand the proposal and the content of the article.
