Retrospective Study

Incidental extravascular findings in computed tomographic angiography for planning or monitoring EVAR: smoker patients, increased lung cancer prevalence?

Maria Antonietta Mazzei, Susanna Guerrini, Francesco Gentili, Giuseppe Galzerano, Francesco Setacci, Domenico Benevento, Francesco Giuseppe Mazzei, Luca Volterrani, Carlo Setacci

Abstract

Aim: to validate the feasibility of high resolution computed tomography (HRCT) of the lung prior to computed tomography angiography (CTA) in assessing incidental thoracic findings during endovascular aortic aneurysm repair (EVAR) planning or follow-up.

Methods: We conducted a retrospective study among 181 patients (143 men, mean age 71
