Circulating microRNAs as diagnostic and prognostic tools for
hepatocellular carcinoma

Yu-Cheng Zhang, Zhuo Xu, Tian-Fu Zhang, Ya-Li Wang

Abstract

Hepatocellular carcinoma (HCC) is an aggressive malignancy and the second leading cause of cancer-related deaths worldwide. Conventional biomarkers exhibit poor performance in the surveillance, diagnosis, and prognosis of HCC. MicroRNAs (miRNAs) are a class of evolutionarily conserved small non-coding RNAs that are involved in the regulation of gene expression and protein translation, and they play critical roles in cell growth, differentiation,
