Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Major revision

Specific Comments to Authors: Dear authors, I read with great interest your paper entitled "Surgery for fibrous dysplasia associated with aneurysmal-bone-cyst-like changes in right femur: A case report" The topic is interesting and well written. However, the literature review is weak. You'd better to perform a complete literature review and compare your management with previous cases of FD & ABC. Best,

Answering: Thank you for your attention. We reported a case of surgery for fibrous dysplasia of the right proximal femur associated with ABC. ABC most commonly occur as primary lesions, and are very uncommon secondary to fibrous dysplasia. After searching in Pubmed database, we find that few studies were to report fibrous dysplasia of the right proximal femur associated with ABC but for craniofacial fibrous dysplasia and aneurismal bone cyst. Besides, few cases-previous cases of FD & ABC-were searched in our database of Hunan University of Medicine General Hospital. Thus, we only report one case aiming to provider value in the future. Thank you for your consideration.
