Role of decision aids in orthopaedic surgery

Isha A ten Have, Michel PJ van den Bekerom, Derek FP van Deurzen, Michel GJS Hageman

Abstract

Medical treatment of patients inherently entails the risk of undesired complication or sided effects. It is essential to inform the patient about the expected outcomes, but also the possible undesired outcomes. The patients preference and values regarding the potential outcomes should be involved in the decision making process. Even though many orthopaedic surgeons are positive towards SDM, it is minimally introduced in the orthopaedic daily practice and decision-making is still mostly physician based. Decision aids are designed to support the physician and patient in the shared- decision-making process. By using decision aids, patients can learn more
