

23rd March 2015

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 16759-review.doc)

Title: Small Bowel Imaging of IBD

Author: Emanuele Casciani, Chiara De Vincentiis, Gianfranco Gualdi

Name of Journal: *World Journal of Radiology*

ESPS Manuscript NO: 16759

We thank the reviewers for their time and comments, and feel that we have addressed each concern.

All the authors have been consulted regarding these changes and agree to the content which has been altered as described below.

Reviewer 1

1. *Intestinal transit scintigraphy can significantly contribute to the examination of the motility of the gastrointestinal tract in IBD.*

As rightly suggested, we added a brief description of the methods mentioned (Page 4 from line 9)

2. *Few quality images would significantly raise the quality of work*

We considered the suggestion but we think that images are not required for this type of article.

Reviewer 2

1. *The title is too vague to understand. That should be changed like "Small Bowel Imaging of IBD".*
We agree with the reviewer and the title has been changed as suggested.

2. *The descriptions about double-balloon or single balloon endoscopy are required as mentioned like capsule endoscopy.*

For completeness, as rightly suggested, we added a brief description of the methods mentioned (Page 4 from line 4).

3. *Period (.) is lacking at the last sentence of page 3*

4. *References No.7 and 8 are not found in the manuscript.*

Thank you for pointing out these formatting issues. Each of these has been corrected.

Thank you again for the helpful comments. We hope our revisions have successfully clarified the reviewers' concerns.

Sincerely yours,

Emanuele Casciani, MD
