Relationship between virological response and FIB-4 index in chronic hepatitis B patients with entecavir therapy

Ni Li, Jing-Hang Xu, Min Yu, Sa Wang, Chong-Wen Si, Yan-Yan Yu

Abstract

AIM: To investigate whether long-term low-level hepatitis B virus (HBV) DNA influences dynamic changes in the FIB-4 index for partial virological responses in chronic hepatitis B (CHB) patients receiving entecavir (ETV) therapy.

METHODS: We retrospectively analyzed 231 nucleos(t)ide naïve (NA) CHB patients
