COMMENTS TO AUTHORS

Dear Sirs, In this manuscript the authors have made an attempt to review the literature regarding the correlation of inflammation-related factors and the ability to predict the prognosis of gastric cancer. This is an interesting manuscript with a very good structure and summary of data. Considering the importance of this field it would be good if the authors could revise the utility of a predictive model which combined some of the factors into a clinically usable model. Nevertheless, the manuscript is pertinent and is in conditions to be accepted for publication.

COMMENTS TO AUTHORS

The authors made a complete review on inflammation-related prognostic factors of gastric cancer in this manuscript. There is a difference between the overall 5-year survival rates of USA GC patients and Japanese or Korean GC patients. Expression patterns of those inflammatory prognostic factors in GC tissues should be analyzed and discussed comparatively. Typos P5, L2 from bottom, non-steroidal P6, L10, have to shown ? Explanations of abbreviations should be added when it first appeared. (eg, CCL)
