COMMENTS TO AUTHORS

This is a letter to the Editor making broad statements about folate metabolism that someone could easily find in a biochemistry textbook.

COMMENTS TO AUTHORS

"This letter is well-written except some grammatical mistakes (Gastric cancer patient has usually an underlying causative ; So if it is replaced, the replacement efficacy is important ; The effects of folate metabolism on gastric cancer need further clinical studies to answer the questions). The arguments are clear and interesting. I think that this letter has to be published."

COMMENTS TO AUTHORS

In this "letter to the editor", the author discussed the folate levels in gastric cancer patients with a dynamic and comprehensive point of view, and given the good readability contents and conclusions. This letter is worth publishing. But there are too many capitalization errors in this letter, such as "dna" for "DNA"....
