

Abdominal Imaging Findings in COVID-19: Preliminary ...

<https://pubs.rsna.org/doi/10.1148/radiol.2020201908>

May 11, 2020 · Diarrhea is common in patients in the ICU , and fluid-filled colon was more common in these patients in our study. However, GI symptoms such as diarrhea are common at admission in patients with COVID-19 and can be overlooked . Although liquid stool often escapes comment on CT images, this finding might provide the first indication of GI symptoms in patients with COVID-19.

Cross-Sectional Abdominal Imaging Findings in Patients ...

<https://pubmed.ncbi.nlm.nih.gov/32905406>

Nine of the 10 patients demonstrated typical lung base findings associated with COVID-19 on both CT and MRI. Twelve CT abdominopelvic examinations, one MRI abdomen, and one right upper quadrant ultrasound (RUQ US) were performed, with three patients undergoing two CT scans during the course of hospitalization. Gastric and bowel wall abnormalities were found on 25% (n=3/12) of abdominal CT ...
