

Dear authors, I congratulate you on the presented editorial. This is a very good presentation of the importance of the presence of PD-L1 and PD-1 in small bowel adenocarcinomas in the prognosis of the disease and the complicated immunological interplay of detectable tumor immune components. The work is important both theoretically and practically, therefore it is meritorious. The editorial is clear, concise and very explicit.

Dear Reviewer,

Thank you very much for your comments. We upload the manuscript as it is. We remain at your disposal. Thank you once again!
