COMMENTS TO AUTHORS

The authors discussed the chemotherapy and targeted therapy progress of gastric cancer and review of literature. I think whether it is suitable to be published depend on the source of contribution to WJG journal. 1. The manuscript systematically reviews many of the significant events of chemotherapy and targeted therapy progress on gastric cancer. It provides detailed information about the chemotherapy and targeted therapy progress of gastric cancer. The structure and logical relationship of text is clear. The authors collected amount of literature materials and details, it may be helpful to reader for comprehension. And it is helpful for clinical physician to master the chemotherapy of advanced gastric cancer. 2. The article lack of a little innovativeness; There are some similar article have been published which can be indexed on Pubmed. And there are little grammar should be polished.

COMMENTS TO AUTHORS

The author discusses the management of advanced gastric cancer and the progress in recent years in chemotherapy, targeted therapy and immunotherapy. For advanced gastric cancer, chemotherapy is sensitive, targeted therapies based on distinct genomic features in the different molecular subtypes. Author compares the efficacy of various drugs of different treatments by observing response rate, time to progression, overall survival and drug toxicities. Besides, in order to make data more clear, author adds tablets of drug efficacy in article. The drugs of these treatments are significance to clinical treatment. However several references are too old, if the author can quote more new articles, this manuscript is better. The language of this article is relatively smooth and has readability. On the whole, his is a good article which deserves publication.

COMMENTS TO AUTHORS

Conclusion section: I would like to see a bit more of personal views in how to choose treatment outside clinical trials from currently available treatment options.

COMMENTS TO AUTHORS

Jou et al reviewed current therapies for unresectable or recurrent gastric cancer. It is well reviewed. However the title of the paper should be changed. The definition of advanced gastric cancer is cancer located in stomach and invaded into muscularis popria and more. Without distant metastasis, the main treatment for it is surgery. This review does not include about surgery. Therefore, the title should be Current and Emerging Therapies in Unresectable of Recurrent Gastric Cancer.
