Hepatocellular carcinoma: A Guide for the hepatologist

Magdy Hamid Attwa, Shahira A El-Etreby

Abstract

Hepatocellular carcinoma (abbreviated as HCC) is ranked as the 5th common type of cancer worldwide and it is considered as the 3rd common reason for cancer-related deaths. HCC often occurs on top of a cirrhotic liver. The prognosis is determined by several factors; the extension of the tumour, the concentration of alpha-fetoprotein (AFP), the histologic subtype of tumour, the degree of liver dysfunction, and the patient's performance status. HCC prognosis is strongly correlated with diagnostic
