COMMENTS TO AUTHORS

The manuscript entitled [Esophageal squamous papillomas with focal dermal hypoplasia and eosinophilic esophagitis] is an interesting case report of a rare disease (FDH) combined with Eosinophilic esophagitis. It is a well written, referenced and illustrated manuscript. The subject is interesting and has some remarks. Diagnostic and therapeutic management of esophageal eosinophilia is correct (adhered to consensus recommendations). I think readers will find it interesting.

COMMENTS TO AUTHORS

Dear authors, I read the case report titled Esophageal squamous papillomas with focal dermal hypoplasia and eosinophilic esophagitis with great interest. The described case is very interesting, well described, and also discussed. My only question is regarding the diagnosis and treatment of eosinophilic oesophagitis at your hospital. Do you perform the diagnosis for possible food allergies in children with eosinophilic oesophagitis and put them on a diet if an allergy is found? Please, add the explanation of this in your paper. I have no other comments and suggest publishing it. Yours sincerely, Reviewer
