Fluid and electrolyte overload in critically ill patients: An overview

Bruno Adler Maccagnan Pinheiro Besen, André Luiz Nunes Gobatto, Livia Maria Garcia Melro, Alexandre Toledo Maciel, Marcelo Park

Abstract

Fluids are considered the cornerstone of therapy for many shock states, particularly states that are associated with relative or absolute hypovolemia. Fluids are also commonly used for many other purposes, such as renal protection from endogenous and exogenous substances, for the safe dilution of medications and as "maintenance" fluids. However, a large amount of evidence
