SPECIFIC COMMENTS TO AUTHORS

The manuscript “Non-arteritic anterior ischemic optic neuropathy combined with retinal branch vein obstruction” deals with the relevant and very frequent subject of arterial disease in the elderly, the case is clear and well illustrated. I think that, if necessary, the text could be shortened; also, the line 160 on page 13, “and... case.” does not seem relevant.

SPECIFIC COMMENTS TO AUTHORS

I am really grateful to review this manuscript. In my opinion, this manuscript can be published in current form. This study reported a case of NAION with concealed BRVO, which was not improved by oral medication. One week later, the authors switched to intravenous administration of drugs to improve circulation, and the patient's visual acuity and visual field were recovered. No hormone therapy was used during the whole process. Based on the result of this report: FFA can help detect hidden BRVO in the diagnosis of NAION; Intravenous infusion of drugs for improving circulation has a positive effect on the treatment of such cases; NAION with concealed BRVO may not need systemic hormone therapy, which is different from the previous point of view of simple NAION treatment.

SPECIFIC COMMENTS TO AUTHORS

Dear Author, 1.The author needs to add the fundus image showing pale disc and poor foveolar reflex. 2.Why CT and MRI were not performed to look for any swelling in the optic nerve ? 3. The authors must mention which Nerve - nourishing and circulation improving iv drugs were administered and in what doses for 2 weeks ? Dose were fixed or in tapering doses? 4. The color and contrast findings pre and post treatment must be mentioned by the authors. 5. The case- report requires major revision and English-correction. Thanks
