Endoscopic palliative resection of a giant 26-cm esophageal tumor: A case report

Yan Li, Lin-Jie Guo, Ying-Cai Ma, Lian-Song Ye, Bing Hu

## Abstract

### BACKGROUND

Esophageal carcinosarcoma, usually presenting as a pedunculated polypoid mass, is a rare malignancy with coexisting sarcomatoid and carcinomatous components. Its imaging and endoscopic characteristics are similar to those of leiomyosarcoma,

## Endoscopic resection of a giant esophageal lipoma: a case ...

<https://academic.oup.com/dote/article-abstract/29/8/1167/2756872> ▼

Dec 01, 2016 · Discussion. Esophageal lipoma is a rare type of esophageal submucosal tumor, accounting for up to 0.4% of all digestive tract benign neoplasms. 1 Most cases of smaller esophageal lipomas are clinically asymptomatic and do not require treatment. In the past, giant esophageal lipomas had mostly been treated with surgery. 2 In the present case, endoscopic resection was performed, ...

Since tumor resection is the only curative treatment for liposarcoma [7, 8], such lesions in the esophagus are usually surgically or endoscopically removed. Of the 35 cases we reviewed, surgical resections, either polypectomy or esophagectomy, were performed in 30 patients (85.7 %), endoscopic polypectomy in three (8.6 %), and ESD in two (5.7 %).

## Giant liposarcoma of the esophagus: A case report

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4562969>

Sep 07, 2015 · In this case report, a giant, well-differentiated esophageal liposarcoma with a dedifferentiated component was removed from a 51-year-old male patient. The tumor displayed a non-specific appearance on imaging and endoscopy, which prohibited an accurate diagnosis pre-operatively.

## Myxoid esophageal liposarcoma: A case report of a rare tumor

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6580014>

1. Introduction. Esophageal liposarcoma represent a rare cause of esophageal tumor, estimated at 0.1–1.5% of esophageal malignant masses [1, 2]. It is a malignant sarcoma that most occurs in the
