COMMENTS TO AUTHORS

1. Is the research retrospective or prospective is unclear. 2. Abbreviations was frequently used in the manuscript but no expansion of abbreviations. For example What is the OLT, HCC, HBV?? There are even abbreviations in the title

COMMENTS TO AUTHORS

In this manuscript, the authors have achieved a lot of work and accumulated much experience in liver transplant in Saudi population. A few of original data and the conclusion by analyzed are important in Saudi population, but a reference to other country. But I have some questions: The authors aim to analyze the tendency in liver transplant from HBV-related hepatic decompensation to HCC, not a indication of LT, so the title is very necessary to be revised, and other revision are also in the text. In the matter of statistical analysis, t value or χ^2 value are need to enhance your article authority. Several words should be corrected in the revision.
