

PEER-REVIEW REPORT

Name of journal: World Journal of Gastroenterology

Manuscript NO: 52106

Title: Hepatic artery stenosis angioplasty and implantation of Wingspan neurovascular stent: A case report and discussion of stenting in tortuous vessels

Reviewer's code: 00608254

Position: Peer Reviewer

Academic degree: MD, PhD

Professional title: Professor

Reviewer's country: Italy

Author's country: United States

Reviewer chosen by: Artificial Intelligence Technique

Reviewer accepted review: 2019-10-18 06:30

Reviewer performed review: 2019-11-04 12:27

Review time: 17 Days and 5 Hours

The treatment described in the article is not new, but the type of material used has not been described before according with the Authors. Although this is only a detail, it is important in such a setting and it is of interest for the specialist involved in this problem. The case is well described and discussed. It would be important to know a was the hepatica artery approached. From above or form the groin? What kind of introducer was used? These are all very important details for a successful treatment. Also it is important to know if and how was the patient hepainized during the procedure

SPECIFIC COMMENTS TO AUTHORS

Hepatic artery stenosis (HAS) represents an important complication post liver transplant occurring which may result in graft failure. Traditional endovascular therapy with angioplasty and stenting may not be available for tortuous HAS. In this report, authors introduced a neurovascular Wingspan stent system which showed stable treatment efficacy as a first practice for HAS. This facilitation broadened the use of neurovascular stent and showed potential therapy for HAS. However here are still some suggestions: 1. Page1 Line44 The current application of new neurovascular stents in OLT induced HAS should be summarized. 2. Page2 Line84-90 Since Wingspan stent may be maneuverable and conformable while also exerting adequate radial force for tortuous HAS, more details should be described during this operation. 3. Figure2-4 Figure legends should be more clearly and uniform stating the date after OLT and after stenting. 4. I suggest a comparison of CT angiogram, doppler ultrasound and angiography simultaneously for three time points: before OLT, 90 days after OLT (PTA) and 100 days after OLT (stenting) in the figures. 5. Please polish the language.
