**Endotipsitis: A case report of the longest latency from insertion to infection, with a literature review on an emerging prosthetic related infection**

Annalan MD Navaratnam, Matthew Grant, David B Banach

#### Abstract

'Endotipsitis' is a poorly understood complication of transjugular intrahepatic portosystemic shunt (TIPS) procedures. We report a case with the longest latency from insertion to infection in the literature, supplemented by a review of the literature, in particular the management of this insidious and variable disease process. A MEDLINE database search was carried out, reviewing all papers with specific words in the title or abstract, and excluding appropriately. Of 283 papers that were reviewed, 22 papers reporting 53 cases in total were included in the analyses. No predominant etiology for
