

PEER-REVIEW REPORT

Name of journal: World Journal of Gastrointestinal Surgery

Manuscript NO: 66465

Title: Outcomes of reduction hepatectomy combined with postoperative multidisciplinary therapy for advanced hepatocellular carcinoma

Reviewer's code: 05391966

Position: Peer Reviewer

Academic degree: MSc, PhD

Professional title: Doctor

Reviewer's Country/Territory: China

Author's Country/Territory: Japan

Manuscript submission date: 2021-04-19

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-05-05 10:05

Reviewer performed review: 2021-05-06 08:42

Review time: 22 Hours

SPECIFIC COMMENTS TO AUTHORS

a good study to show the significance of hepatectomy combining with other treatments, I suggest the clinicalpathological comparision between cPOCR(-)TKI(+) and POCR(-)TKI(-) groups should also be included in this study.

SPECIFIC COMMENTS TO AUTHORS

The combination of reduction hepatectomy and multidisciplinary postoperative treatment has been considered the best treatment for advance HCC recently. In this MS, the authors retrospectively analyzed 30 cases of advanced HCC patients performed with reduction hepatectomy. This research has a valuable contribution to the field. However, there are some shortcomings needed to be improved. 1. Abstract: the background in this part is not specific, especially the first sentence. This is not the exact reason why they want to analyze these clinical cases. 2. Introduction: In this part, please give a precise definition of “multidisciplinary postoperative treatment” in the text. Also, more detailed background and outcomes of multidisciplinary postoperative treatment are needed in the treatment of advanced HCC. 3. Discussion: please discuss some preoperative treatments in the treating of advanced HCC combining with hepatectomy. 4. Due to the limited sample size, more and multi-centered cases are needed.
