COMMENTS TO AUTHORS

The manuscript is truly informative, although I do have that some aspects needs to be clarified. 1) The generalized linear model the authors are using may be not the only model that can work and needs to be clarified in discussion. 2) The dependent measure for each dependent effect will be based on the change from pre to post-test measurements (i.e., gain scores) is not precise, because the time lapse between two states (pre- and post-test measurement) may be variable. The introduction of an interim value may be important. 3) Discussion and references regarding FTO polymorphisms should be added.

COMMENTS TO AUTHORS

The authors created and an obesity prevention program that formally coordinated multiple sectors and described it in detail. The paper is well-written and provides information regarding an newly developed program for prevention of childhood obesity.
