COMMENTS TO AUTHORS

The theme is current and interesting. The new approach of gastric tumors is challenging and needs validation through further studies.

COMMENTS TO AUTHORS

This paper describes the various techniques for full thickness resection of gastric tumours which is interesting. The paper however can be improved with the following: 1. The language can be improved to make it more easy for the reader to understand. 2. Each described technique should have figures to illustrate the technique. 3. There should be a deeper discussion of the technical aspects of each technique and more representation of results and safety in table format.
