## SPECIFIC COMMENTS TO AUTHORS

The article showed us the symptoms with ILD, characteristics and treatments of the five patients. However, some questions should be answered and resolved. Q1: Systemic Juvenile Idiopathic Arthritis-Associated Lung Disease is derived from Arthritis, and therefore it is recommended to add management of rheumatoid arthritis. Q2: In the conclusion section of this paper: Extensive rash, serositis (especially pleuritis), full-blown MAS with transaminitis, and biologic infusion reaction are the main predictors of ILD, which might be insufficiently substantiated. It is recommended that the authors make the predictive model more convincing by collecting relevant literature and related predictors; Q3: The authors mentioned earlier that the purpose of the study was to describe the clinical and laboratory features of the disease, but the ultimate conclusion was the management of the ILD. Therefore, it is recommended to be consistent before and after. Q4: In the discussion section, it is important to focus on the clinical features of the cases and discuss them logically associated with relevant literature Q5: In Figure 3, the pathological mechanism should be described in the text and supported by relevant citations Q6: The grammatical descriptions are illogical in the sentences such that

Trisomy 21 has a patient and the expression of “a case series report” in the title correct?
