A novel case of Trevor's disease: Adult onset and later recurrence

Amrit S Khalsa, Neil S Kumar, Matthew A Chin, Richard D Lackman

Abstract

Dysplasia epiphysealis hemimelica (DEH), or Trevor's disease, is an osteocartilaginous epiphyseal overgrowth typically occurring in children. The literature reports 6 adult cases and none describe recurrence requiring additional procedures. We present a new-onset proximal tibial DEH in an adult recurring approximately 3 years after open
