Retrospective Cohort Study

Post-operative CT scan - Reliable tool for quality assessment of complete mesocolic excision

Cristian Livadaru, Stefan Morarasu, Tudor Cristian Frunza, Florina A Ghitun, Elena Florina Paiu-Spiridon, Florina Sava, Cristina Terinte, Dan Ferariu, Sorinel Lunca, Gabriel Mihail Dimofte

Abstract

BACKGROUND

Quality control in colon cancer surgery is an ongoing debate ever since standardization proved to be highly efficient in improving survival in rectal cancer. Complete Mesocolic Excision (CME) is widely acclaimed as the new gold-standard in colon cancer resections, thus it is imperative to establish quality criteria of CME in order to make it easily understood and verified by surgeons worldwide. One simple and reproducible tool
