Novel oral-targeted therapies for mucosal healing in ulcerative colitis

Elisabetta Antonelli, Vincenzo Villanacci, Gabrio Bassotti

### Abstract

Ulcerative colitis (UC), a chronic, relapsing remitting disease of the colon and rectum, is characterized by inflammatory ulceration of the mucosa. Current UC therapy relies on controlling acute episodes and preventing relapses. To predict modifications in the natural course of UC, mucosal healing (MH) has emerged as a major treatment goal. Endoscopic
