**COMMENTS TO AUTHORS**

I would be very glad to review the paper because the subject is interesting. Your manuscript titled " Splanchnic Vasodilation and Hyperdynamic Circulatory Syndrome in Cirrhosis " which you submitted to the World Journal of Gastroenterology is a well written article. The text is well arranged and the logic is clear.

**COMMENTS TO AUTHORS**

Bolognesi et al. reviewed articles about splanchnic vasodilatation and hyperdynamic circulatory syndrome in cirrhosis. This seems an important issue in this area. If possible, authors may add one figure, which indicates the associations between vasodilator system and portal hypertension.

**COMMENTS TO AUTHORS**

This paper by Bolognesi et al is nicely exploring the splanchnic vasodilation and the hyperdynamic circulatory syndrome in patients with cirrhosis. It is well written with a very complete reference section. May I suggest adding a paragraph summarizing (clinically-relevant) way to alter the splanchnic vasodilation and the hyperdynamic circulatory syndrome in patients with cirrhosis (it is currently only covered here and there in other paragraphs)? A table or figure could also further improve the quality of this nice contribution. Please revise "encephalopathy" instead of "hencephalopathy".

**COMMENTS TO AUTHORS**

General comments This is an important review article in the field of hemodynamics in cirrhosis. Article is very well written. Specific comments for revision 1. It will improve the quality of review if a diagram is given depicting the various hemodynamic changes. 2. Give some review regarding human studies and mechanism of action of various drugs on the hemodynamics in control of variceal bleeding(terlipressin), refractory ascites (midodrine) and hepatorenal syndrome(terlipressin and noradrenaline). 3. Correct the spelling mistakes as on: a. Page 4-line 7- hepatic acinis. b. Page 4-line 10- centrolobular venules c. Page 4-line 12- small nodulativity
