Observational Study

¹² Add-on pegylated interferon augments hepatitis B surface antigen clearance vs Continuous nucleos(t)ide analog monotherapy in Chinese patients with chronic hepatitis B and hepatitis B surface antigen ≤ 1500 IU/mL: An observational study

Wu PF *et al.* Peg-IFN α treatment for CHB patients with HBsAg ≤ 1500 IU/mL

Abstract

BACKGROUND

Nucleos(t)ide analog (NA) has shown limited effectiveness against Hepatitis B surface antigen (HBsAg) clearance in chronic hepatitis B (CHB) patients.

Hepatitis B

Medical Condition

Abdominal pain, extreme fatigue and weakness

A serious infection of the liver caused by hepatitis B virus (HBV).

Common (More than 200,000 cases per year in US)

Transmitted through direct contact
