SPECIFIC COMMENTS TO AUTHORS

As *P. aeruginosa* is a common cause of respiratory and urinary tract infections, as well as bloodstream infections, its infections are priority healthcare-associated infections in some hospitals. Recent research has increasingly focused on the antibacterial effect of compounds found in traditional Chinese medicine. This study analyzed the distribution of carbapenem-resistant *P. aeruginosa*. The study is well designed and the performed. The results are very interesting. Minor comments: 1. The manuscript requires a minor editing. Some minor language polishing should be corrected. 2. How about the limit of this study? The authors should make a discussion about this. 3. The references list should be edited and updated.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of anti-bacterial mechanism of baicalin-tobramycin combination on carbapenem-resistant *Pseudomonas aeruginosa*. The manuscript is well written. The reviewer recommends to accept this manuscript after a minor editing. Thank you.

Answer

1. I have polished the article.
2. The limits of this study have been discussed in the article.
3. The list of references has been edited and updated.
4. The three-row table has been updated.
